

iADMS

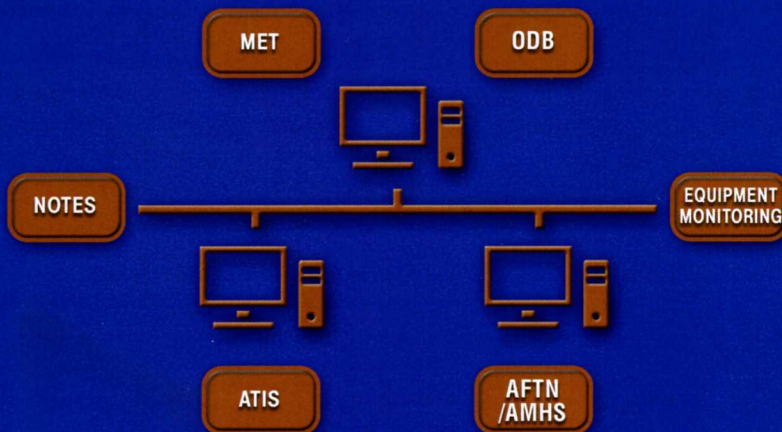

INTEGRATED AIRPORT DATA MANAGEMENT SOLUTIONS

Sensei is a suite of complementary packages providing comprehensive operational data for ATC, engineering and administration on a single PC network.

Designed specifically for air traffic control tower operations and developed in conjunction with real airport users Sensei continues to evolve to meet the on-going requirements of our customers.

It brings together a diverse range of activities including meteorological reporting, ATIS, AFTN communications, access to reference material and web URLs, equipment monitoring & control

(e.g. nav aids, AGL, power and communication systems) and flight data processing (flight information displays, airfield logbook, statistical reporting and movement billing).

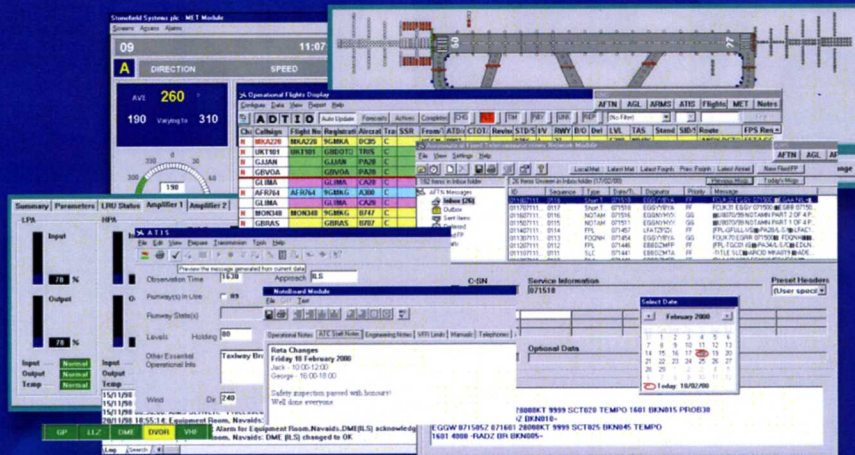

providing
state of the art
communication systems
for the aviation industry

ARTEMIS: THE COMPLETE SOLUTION FOR AFTN, CIDIN AND AMHS COMMUNICATIONS

All these facilities and more at every workstation

KEY FEATURES

■ Avoids duplication of effort

Meteorological data is imported directly into both METAR and ATIS report forms for instance. Flight data received via the AFTN or AMHS is processed automatically into the Flight Movements Database.

■ Simple to use, quick to learn

E-mail style user interface for AFTN and AMHS, for instance, means that many operators become adept very quickly. High contrast meteorological data displays provide maximum clarity of layout and ease of visibility.

■ Safe and highly reliable

Resilient industrialised PC server technology with dual redundancy and standard commercial client PC hardware.
